PROFESSIONAL SUMMARY

Full Stack Web Developer with 3+ years of experience designing and developing scalable RESTful APIs, CMS platforms, and auction-based web applications. Proficient in PHP, Laravel, JavaScript, React.js, and Node.js with a strong background in database optimization, third-party API integrations, and automated workflow management. Adept at delivering high-performance backend solutions in healthcare and auction domains.

WORK EXPERIENCE

Full Stack Web Developer – Consultant

Meraki TalentWorks (Client: GOQII) | Govandi, Maharashtra | Oct 2025 – Present

Domain: Healthcare

- Designed and developed secure, high-performance RESTful APIs for web and mobile healthcare applications, ensuring reliable data exchange and scalability.
- Integrated multiple healthcare third-party APIs and implemented webhooks for WhatsApp messaging, enabling real-time notifications and automated communication workflows.
- Developed a Role-Based CMS with integrated AI-powered blog generation, accelerating content creation by 60% and reducing manual effort; implemented SSO Login.
- Optimized backend logic and database queries, resulting in faster API response times and improved overall system efficiency.

Key Projects: PMS, GOQII Challenge, CMS, COC (Circle Of Care)

Full Stack Web Developer

A One Salasar | Thane, Maharashtra | Feb 2023 – Oct 2025

Domain: Auction

- Developed and managed end-to-end auction-based web applications, including backend logic, bidding workflows, and user management systems.
- Prepared client-specific reports and implemented custom auction functionality aligned to individual client requirements, ensuring scalable and flexible workflows.
- Built RESTful APIs and implemented CRON jobs on production servers for automated auction status updates, report generation, and background processes.

Key Projects: Salasar Auction (Admin, Vendor, User), CRM, AXEL Housing, Inspection, Billing Invoice

EDUCATION

Master of Science in Computer Science

University of Mumbai, Maharashtra | Jul 2023 – Sep 2025 | CGPI: 8.92

PROJECTS

NotiFlow — Multi-Channel Notification Platform [GitHub](#)

Stack: Laravel 11, React 18, Inertia.js, MySQL, Laravel Queues, Supervisor, Nginx

- Architected a multi-tenant SaaS notification platform enabling developers to send SMS (Twilio/Vonage), Email (SendGrid/AWS SES), and Slack alerts through a single unified REST API, with full per-app channel isolation and auto-generated API keys.
- Implemented an asynchronous queue system using Laravel's database driver and Supervisor-managed workers with named queues (sms, email, slack, webhooks) and exponential backoff retry logic (30s, 120s, 300s), achieving reliable delivery without Redis dependency.

- Built a configurable fallback chain engine — when a primary channel exhausts all retries, FallbackService automatically dispatches the next channel job (e.g., SMS to Email), with each attempt independently logged including was_fallback flag for full delivery observability via propagated trace_id.
- Designed HMAC-SHA256 signed webhook delivery system (X-NotiFlow-Signature) with a dedicated webhooks queue, automated retry on non-200 responses, and a webhook_deliveries audit table tracking HTTP status, response body, and latency per attempt.

TECHNICAL SKILLS

- **Languages:** PHP, JavaScript
- **Frameworks & Libraries:** Laravel, CodeIgniter, Express.js, React.js, Node.js, jQuery, Ajax, EJS
- **Databases:** MySQL, PostgreSQL, PL/SQL
- **Tools & Platforms:** Git, Bitbucket, SourceTree, Postman
- **Competencies:** RESTful API Design, Webhook Integration, Role-Based Access Control (RBAC), SSO, CMS Development, CRON Jobs, Database Query Optimization, Third-Party API Integration
